

C+-WIN

Winning Over COVID - 19

I just recovered. Should I get the vaccine?

If you are infected:

- 1** Between the two doses, you can safely take the second dose between 2-4 weeks after complete symptom resolution.
- 2** Before both the doses, you can safely take the first dose after 14 days from complete symptom resolution.
Note: In both of the above cases,
You should still get the complete vaccine course since it provides a strong immune response against the disease.
- 3** After both the doses, there is NO need to take the vaccine again. The previous vaccine doses still provide cover and will reduce the severity of your symptoms
